

## HIH Property Management Introduces Central Waste Management to Optimise CO2 Footprint

- HPM collaborates LINS Recycling GmbH & Co. KG
- Waste management to be introduced for around 200 properties by the end of the year; additional properties under consideration

**Hamburg, June 15<sup>th</sup>, 2021** – HIH Property Management (HPM) collaborates with LINS Recycling GmbH & Co. KG, a consultancy firm specialised in waste disposal issues, to introduce a central waste management. In addition to power, heat and water consumption data, HPM will also collect waste data in future. Collecting and analysing the data will enable HPM to keep optimising the CO2 footprint of the properties in its care. For the time being, the new system will be introduced for around 200 properties owned by various clients.

“The relevant data for tracking waste volumes are rather difficult to collect because some waste fractions are identified neither on the invoices received from private disposal companies nor by municipal notifications of charges. Thanks to the collaboration with LINKS Recycling, we now have the possibility to aggregate data like, for example, the quantities of the various waste fractions and their recycling routes at the properties. This way, our property managers get an overview of all the waste data they need to optimise things in the medium term,” said Christian Kypke, member of the senior management of HPM.

“The central waste management will moreover be an integral component of our ESG consultancy. These roughly 200 assets are just a beginning. We are in talks with our clients to integrate additional assets and to thereby improve our carbon footprint,” elaborated André Vollbach, Managing Director of HPM.

LINKS Recycling acts as central contact, handles the coordination with the municipalities and the private waste disposal companies, optimises the waste management concept, and gathers the necessary data.
